## Introduction to Polynomials

Text: 5.1

- Tell whether an expression is a polynomial or not a polynomial
- Identify end behavior from standard form of a polynomial
- List and explain the important parts of a graph or table such as; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; end behavior; and periodicity
- Sketch a graph given a verbal description.

Vocabulary: monomial, degree of a monomial, polynomial, degree of a polynomial, end behavior, algebraic expression, leading coefficient, relative maximum, relative minimum, standard form of a polynomial, symmetries

### Degree of Monomials & Polynomials

A **M**\_\_\_\_\_ is a real number, variable, or a product of a real number and one or more variables with whole number exponents.

**Example:** 8,  $5x$ ,  $3x^2$

The **D**\_\_\_\_\_ of a **MONOMIAL** is the value of the exponent in the monomial.

**Example:**  $3x^5$  is degree 5.A

**P**\_\_\_\_\_ is a real number, variable, or a product of a real number and one or more variables with whole number exponents.

**Example:**  $5x$ ,  $6x + 3$ ,  $7x^2 + 2x$

The **D**\_\_\_\_\_ of a **POLYNOMIAL** is the greatest degree among the monomial terms of the polynomials.

*(This value tells the maximum number of **Z**\_\_\_\_\_).*

**Example:**  $7x^2 + 2x$  is degree 2

### STANDARD FORM of a Polynomial

The **S**\_\_\_\_\_ **F**\_\_\_\_\_ of a polynomials function arranges the terms by the **D**\_\_\_\_\_ in **DESCENDING** numerical order.

**Example 1:** Write in standard form.

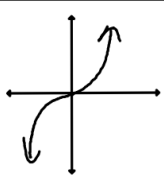

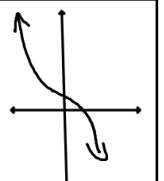

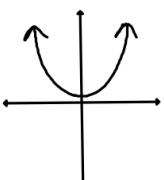

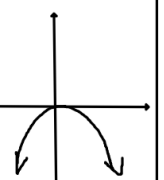

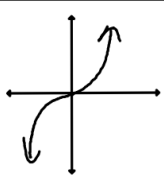

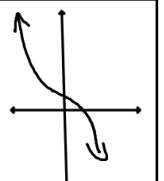

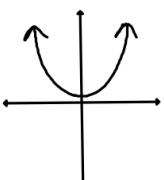

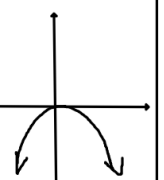

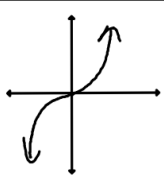

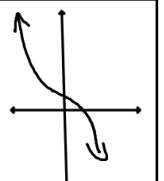

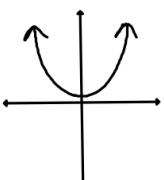

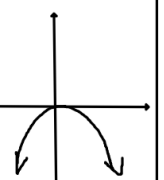

$$5x + 2 + x^2 - 6x^5$$

**You Try It!** Write the polynomial in standard form and state the degree of the polynomials

1.)  $3x^3 + 2x^4 - 2x + 4x^2 + 1$

2.)  $4n^5$

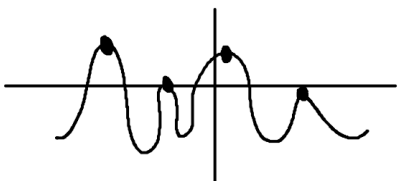

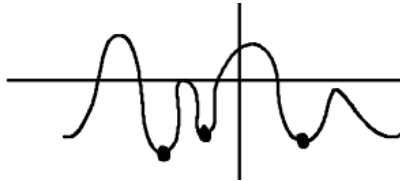

Definitions	
<p>The L_____ C_____ is the coefficient of the variable with the highest degree.</p> <p><b>Example:</b> <math>5x^3 + 2x</math> Leading Coefficient: 5</p>	<p>The C_____ T_____ is the number without the variable.</p> <p><b>Example:</b> <math>-3x^7 + 1</math> Constant term: 1</p>
<p>The T_____ P_____ are the places where the graph changes direction.</p>	<p>The E_____ B_____ describes the direction of the graph as you move from left to right away from the origin</p>

End Behavior						
<p>End Behavior is due to the following:</p> <p>✓ Degree</p> <p>✓ Sign of leading coefficient</p>	<p><i>Positive Leading Coefficient</i></p> <p><i>Negative Leading Coefficient</i></p>					
	<p><i>Odd Degree</i></p> <p><i>Even Degree</i></p>	<table border="1"> <tr> <td> <p><i>End Behavior:</i></p>  <p><math>y = x^{odd}</math></p> </td> <td> <p><i>End Behavior:</i></p>  <p><math>y = -x^{odd}</math></p> </td> </tr> <tr> <td> <p><i>End Behavior:</i></p>  <p><math>y = x^{even}</math></p> </td> <td> <p><i>End Behavior:</i></p>  <p><math>y = -x^{even}</math></p> </td> </tr> </table>	<p><i>End Behavior:</i></p>  <p><math>y = x^{odd}</math></p>	<p><i>End Behavior:</i></p>  <p><math>y = -x^{odd}</math></p>	<p><i>End Behavior:</i></p>  <p><math>y = x^{even}</math></p>	<p><i>End Behavior:</i></p>  <p><math>y = -x^{even}</math></p>
<p><i>End Behavior:</i></p>  <p><math>y = x^{odd}</math></p>	<p><i>End Behavior:</i></p>  <p><math>y = -x^{odd}</math></p>					
<p><i>End Behavior:</i></p>  <p><math>y = x^{even}</math></p>	<p><i>End Behavior:</i></p>  <p><math>y = -x^{even}</math></p>					
<p><b>Example 2:</b> What is the end behavior of the graph?</p> <p><math>y = 4x^3 - 3x</math></p>	<p><b>Example 3:</b> Describe the end behavior of</p> <p><math>y = -4x^3 + 2x + 7</math></p>					

**You Try It!** Describe the end behavior of each

3.)  $y = -7x^5 + 2x$

4.)  $y = 2x^2 + 3x + 1$

Relative Maximums and Minimums	
<p>A Relative M_____ is the value of a function on an up to down turning point.</p>	<p>A Relative M_____ is the value of a function on a down to up turning point.</p>
	

**Example 4:** Look at the graph and describe

1. Where the graph increases or decreases
2. End Behaviors
3. Zeros of the function
4. Maximums and Minimums

**Example 5:** Create a sketch using the verbal description

Degree: 4

Leading Coefficient: 2

Y-intercept: (0, 3)

Max # of real zeros: 4

End Behavior: up/up

### You Try It!

**5.)** Look at the graph and describe where the graph increases and decreases, and what the end behaviors, zeros, maximums and minimums are.

**6.)** Create a sketch

Degree: 3

Leading Coefficient: -1

y-intercept (0,2)

Max. # real zeros: 3

End Behavior: UP/DN

# #2

## Roots of Polynomials

Text: 5.2

- Factor out a GCF
- Identify roots of a polynomial from factored form
- Make connection between roots, zeros, solutions, and x-intercepts
- Make a rough sketch of the graph of a polynomial given roots and standard form
- Change the form of an expression to identify key features such as slope, intercepts and end behavior

Vocabulary: factor, factored form, greatest common factor (GCF), roots, solutions, x-intercepts, zeros

### Definitions

The common factor of each term of an expression that has the greatest coefficient and the greatest exponent is called the

G\_\_\_\_\_C\_\_\_\_\_F\_\_\_\_\_.

*Think biggest number and variable that all terms have in common*

FACTORED FORM is a polynomial written in the following form:

GCF ( ) ( )

\*\*\*For help with factoring, see notes for Unit 2 Concept 3\*\*\*

**Example 1:** Factor out the GCF of

$$3x^3 + 6x^2 + 3x$$

**Example 2:** Put  $x^3 - 2x^2 - 15x$  in

factored form

### Solving Polynomial Equations by Factoring

R\_\_\_\_\_, Z\_\_\_\_\_, S\_\_\_\_\_, and X-\_\_\_\_\_ are any values for x that make  $f(x) = 0$ .

**Example 3:** Solve  $x^3 - 2x^2 - 15x$

Factor out GCF

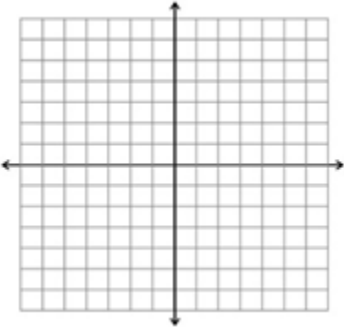

Factor what's left

Set each factor=0

**You Try It!** Solve by factoring

1.)  $y = x^3 + 3x^2 - 10x$

2.)  $y = x^4 - 8x^3 + 16x^2$

Graphing a Rough Sketch	
<b>Example 4:</b> $y = (x + 2)(x - 1)(x - 3)$	
Find the zeros (set each factor = 0)	
Pick points between each zero & plug into equation to find y-values	
Identify the end behavior	
Connect points and graph	

**You Try It!** Find the zeros of the function, then make a rough sketch.

3.)  $y = x(x - 2)(x + 5)$

# #3

## Transformations of Polynomials

Text: 5.9

- Explain how  $k$  changes the graph depending on where  $k$  is and what number  $k$  is.
- Find the value of  $k$  given graphs
- Compare properties of two functions represented in a different way

Vocabulary: even function, odd function, vertical shift, horizontal shift, vertical dilation, horizontal dilation, reflection

Definitions	
<b>Horizontal Shift</b> $f(x + k)$	<b>Vertical Shift</b> $f(x) + k$
Shift left or right of the graph caused by adding or subtracting a value to the $x$ term in a function  <b>Example:</b> $y = (x - 3)^3$ $y = (x + 4)^3$	Shift up or down of the graph caused by adding or subtracting a value to the entire function  <b>Example:</b> $y = (x - 3)^3 + 2$ $y = (x + 4)^3 - 3$
<b>Horizontal Dilation</b> $f(k \cdot x)$	<b>Vertical Dilation</b> $k \cdot f(x)$
Stretch or shrink of the graph caused by multiplying onto the $x$ term in a function  <b>Example:</b> $y = (\frac{1}{2}x - 3)^3$ $y = (3x + 4)^3$	Stretch or shrink of the graph caused by multiplying onto the entire function  <b>Example:</b> $y = \frac{1}{2}(x - 3)^3$ $y = 3(x + 4)^3$
<b>Reflection</b> $-f(x)$	
Flip of the graph caused by a negative being multiplied to the function  <b>Example:</b> $y = -2(3x + 4)^3$	

Verbal Description $\rightarrow$ Equation
<b>Example 1:</b> What is the equation of the graph of $y = x^3$ under a vertical compression by a factor of $\frac{1}{2}$ followed by a reflection over the $x$ -axis, a horizontal translation of 3 units to the right and a vertical translation of 2 units up?

**You Try It!** Write the equation given the following description.

- 1.) What is the equation of the graph  $y = x^3$  under vertical stretch by factor of 4, horizontal translation 2 units right and vertical translation 2 units down.

### Equation → Verbal Description

**Example 2:** How has the function  $y = x^3$  been transformed?

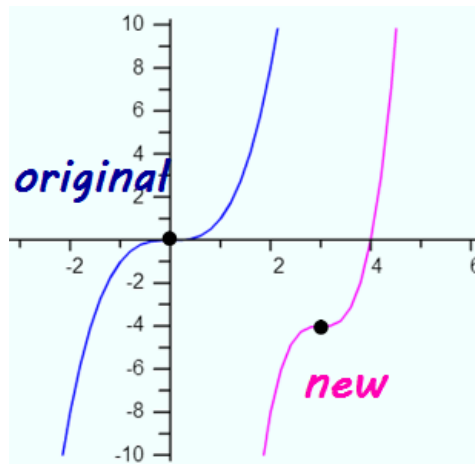

$$y = -4(x + 6)^3 - 5$$

**You Try It!** Describe the transformation of  $y = x^3$

2.)  $y = -2(x - 3)^3 + 4$

### Graph → Equation

**Example 3:** Write an equation for the graph (translation/reflections only)

**You Try It!** Write the equation of the following graph.

3.)

# #4

## Operations on Polynomials

Text: 6.6

- I can simplify polynomial expressions
  - I can multiply polynomials
  - Put functions together using addition, subtraction, multiplication, and division
- Vocabulary: box method, distributive property

### Definitions

**LIKE TERMS** are terms that share the same V\_\_\_\_\_ with the same E\_\_\_\_\_.

**Example 1:** Combine like terms  
 $9 - x^2 + 4x + 2x^3 - x + 5$

### Adding & Subtracting Polynomials

*Just combine like terms*

**Example 2:**  $(2x^2 + x - 3) + (x - 1)$

**Example 3:**  $(4x^3 + 2x^2 - 9) - (3x^2 + 4)$   
*Note: When you subtract distribute the -1*

### Multiplying Polynomials

*Use the box method*

**Example 4:**  $(3x^2 + 2x + 4)(3x - 5)$

A) Put factors on outside of box

B) Multiply to fill box

C) Combine like terms

**You Try It!** Perform the indicated operations

**1.)**  $(3x + 2x^4 - 5) + (2x - 1)$

**2.)**  $(4x^3 - 3x + 9) - (2x^3 - 4)$

**3.)**  $(6x^4 - 3x^2 + 7)(3x + 8)$

**#5****Solving Polynomials****Text: 5.3** Explain why the x-coordinates of the points where the graphs of two functions meet are solutions

Vocabulary: no new vocabulary

**Solving Polynomials***Factor out GCF, then factor or use Quadratic Formula*

\*\*\*For help with factoring/solving by factoring, see notes for Unit 2 Concept 3 &amp; 4\*\*\*

\*\*\*For help with the Quadratic Formula, see notes for Unit 2 Concept 6\*\*\*

**Example 1:** What are the real or imaginary solutions of the equation?

$$15x^4 - 20x^3 - 35x^2 = 0$$

**Example 2:** What are the real or imaginary solutions of the equation?

$$6x^2 + 11x - 10 = 0$$

**Example 3:** What are the real or imaginary solutions of the equation?

$$2x^3 - 5x^2 = 4x$$

## Special Cases

**Example 4:**  $3x^3 - 27x = 0$

**Example 5:**  $2x^4 - 20x^3 + 50x^2 = 0$

**You try it!** What are the real or imaginary solutions of the equation?

1.)  $6x^2 + 13x - 5 = 0$

#6

### Dividing Polynomials

Text: 5.4

- Use the box method to divide a polynomial by  $(x-a)$ .
- Write the answer in the correct form with any remainder written over the  $(x-a)$ .
- Determine if  $(x-a)$  is a factor of a polynomial
- Divide a polynomial by a polynomial of the same or lesser degree
- Write the answer in the correct form with any remainder written over the bottom polynomial

Vocabulary: dividend, divisor, quotient, remainder

#### Definitions

**DIVIDEND** is the number you divide I \_\_\_\_\_

$$12 \div 5 = 2 \text{ R}2$$

**DIVISOR** is the number you divide B \_\_\_\_\_

$$12 \div 5 = 2 \text{ R}2$$

**QUOTIENT** is the A \_\_\_\_\_ to a division problem

$$12 \div 5 = 2 \text{ R}2$$

**REMAINDER** is what is L \_\_\_\_\_ after you divide

$$12 \div 5 = 2 \text{ R}2$$

#### Dividing Polynomials

*Use the Box Method*

**A.** Fill in any missing terms

**B.** Put divisor on side of box

**C.** Put 1<sup>st</sup> term of dividend inside box

**D.** "Reverse engineer" the rest!

**E.** If last term inside box doesn't match dividend then have remainder

**Example 1:**  $(4x^2 + 23x - 16) \div (x + 5)$

<p><b>A.</b> Fill in any missing terms</p> <p><b>B.</b> Put <u>divisor</u> on side of box</p> <p><b>C.</b> Put 1<sup>st</sup> term of <u>dividend</u> inside box</p> <p><b>D.</b> "Reverse engineer" the rest!</p> <p><b>E.</b> If last term inside box doesn't match <u>dividend</u> then have remainder</p>	<p><b>Example 2:</b> <math>(x^6 - 3x + 5) \div (x - 1)</math></p> <div style="text-align: center; margin: 20px 0;"> <table border="1" style="border-collapse: collapse; width: 100%; height: 40px;"> <tr> <td style="width: 16.6%;"></td> <td style="width: 16.6%;"></td> <td style="width: 16.6%;"></td> <td style="width: 16.6%;"></td> <td style="width: 16.6%;"></td> <td style="width: 16.6%;"></td> </tr> <tr> <td></td> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> </table> </div>												

**You Try It!** Use the box method to divide the polynomial

**1.)** Use polynomial division to divide  $3x^2 - 29x + 56$  by  $x - 7$ . What is the quotient and remainder?

<p><b>Determine whether <math>(x - a)</math> is a factor</b></p> <p><i>Plug in a for x. If you get ZERO, <math>x - a</math> IS A FACTOR.</i></p>
<p><b>Example 3:</b> Is <math>(x - 1)</math> a factor of <math>(3x^4 - 4x^3 + 12x^2 + 5)</math>?</p>

**You Try It!**

**2)** Is  $(x + 1)$  a factor of  $(x^3 + 4x^2 + x - 6)$ ?

# #7

## Using Polynomial Identities

Text: Concept Byte 5.5

- Show that the two sides of polynomial "formula" are equal
- Use the three polynomial "formulas" to explain numerical relationships

Vocabulary: numerical relationship, identity

<p style="text-align: center;"><b><u>Polynomial Identities</u></b></p> <ul style="list-style-type: none"><li>• Difference of Squares</li><li>• Sum of Cubes</li><li>• Differences of Cubes</li></ul> <p style="text-align: center;"><u>How to Find</u></p> <ul style="list-style-type: none"><li>• Identify "a" and "b"</li><li>• Look for pattern</li></ul>	<b>Difference of Squares</b> $a^2 - b^2 = (a + b)(a - b)$
	<b>Example 1:</b> $x^2 - 81$
<b>Sum of Cubes</b> $a^3 + b^3 = (a + b)(a^2 - ab + b^2)$	<b>Differences of Cubes</b> $a^3 - b^3 = (a - b)(a^2 + ab + b^2)$
<b>Example 2:</b> $x^3 + 27$	<b>Example 3:</b> $x^3 - 216$

**You Try It!** Use the polynomial identities to factor each expression

1)  $x^2 - 25$

2)  $x^3 + 64$

3)  $a^3 - 125$

#8

**Polynomial Models in the Real World****Text: 5.8**

- Explain properties of a real world situation from complex equations
- Relate the domain of a function to its graph
- Identify the input values that make sense in a real-world situation
- Calculate the average rate of change of a function from an equation and/or table
- Interpret and estimate the average rate of change of a function given a graph

Vocabulary: domain, rate of change, slope, interval

**Example 1:** Write a variable expression in both factored form and standard form for the area of a square whose side is  $x + 8$

**Example 2:** You can represent volume with a cubic function. If you start with a rectangular piece of cardboard, cut out a square from each corner, and then fold up the sides, you will have an open top rectangular solid.

**A.** If you start with an 8.5 in. by 11 in. piece of cardboard, what is the length, width and height of the rectangular solid if you cut out a 1 in. by 1 in. square from each corner?

**B.** What is the volume of the box?

**C.** If you cut an  $x$  in. by  $x$  in. square from each corner, what is a general equation for the volume of the rectangular solid? Write this in both factored form and standard form?

**Example 3:** A section of a bridge can be modeled by the function  $f(x) = x^2 - 21x + 98$ . Support beams for this bridge will be placed at one of the zeros. What are the possible locations for the support beams?

**Example 4:** The dimensions of a window are  $2x + 10$  and  $x + 3$ . What is the perimeter of the window?

**Example 5:** The expression  $V(x) = x^3 - 13x + 12$  represents the volume of a rectangular safe in cubic feet. The length of the safe is  $(x + 4)$ . What linear expressions with integer coefficients could represent the other dimensions of the safe? Assume that the height is greater than the width.

**Example 6:** An arrow is shot upward. Its height  $h$ , in feet, is given by the equation  $h = -16t^2 + 32t + 5$ , where  $t$  is time in seconds. The arrow is released at  $t = 0$ s.

**A.** How many seconds does it take until the arrow hits the ground?

**B.** How high is the arrow after 2 seconds?
